

U.S. National Phase of PCT/JP05/03585
Preliminary Amendment dated: August 30, 2006

ABSTRACT OF THE DISCLOSURE

A toy (10) equivalent to a storage medium containing communication start data and identification data is connected to an intermediate connection device (50) having identification data and connected to a PC (20). The PC (20) reads out the communication start data from the toy (10) and reads out identification data respectively from the toy (10) and the intermediate connection device (50). By a communication program started by the communication start data, the PC (20) establishes connection to a server (30) and transmits the read-out identification data to the server (30). The server identifies distribution data corresponding to a combination of the identification data received, according to the data identification table, and transmits the identified distribution data to the PC (20).

ABSTRACT OF THE DISCLOSURE

To provide a learning system which can supply a high-quality learning information to a student, a learning system (10) connects a terminal device (41A) for a student having an operating portion (45) and a display portion (44) displaying an image visible by the student, to a terminal device (41B) for instructor having a display portion (44) displaying an image visible by an instructor, so as to freely communicate, and transmits and receives learning information relating to a learning between them, the terminal device (41A) for student sequentially collects learning operation information on the basis of operation of the operating portion (45) with respect to question information relating to the learning displayed on the display portion (44) so as to transmit, and an image relating to the learning operation information is sequentially displayed on the display portion (44).
